**Other Toolbar Options**
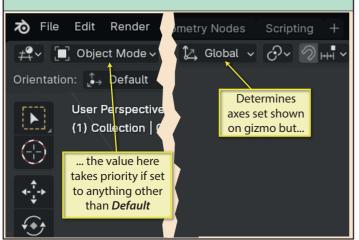

We have already covered the main Toolbar options but a few of the lesser choices remain and are described in this section.
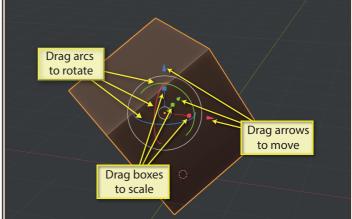

The Transform Tool

The **Transform tool** creates a gizmo which combines the scale, rotate and move operations as well as the rollerball option.

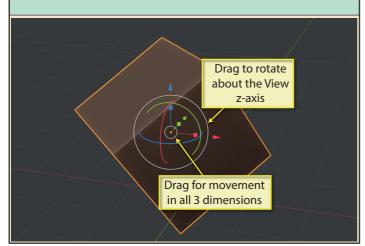

The axes set used depends on the *Transformation Orientation* but this can be overridden the *Orientation* setting when not set to *Default*.

Determines axes set shown on gizmo but...

... the value here takes priority if set to anything other than *Default*

Dragging on the appropriate part of the gizmo initiates the rotation, scaling, or moving.

Drag arcs to rotate

Drag arrows to move

Drag boxes to scale

Dragging on the outer white circle, rotates the object around the *View z-axis*. Dragging on the inner white circle allows free movement in all three dimensions.

Drag to rotate about the View z-axis

Drag for movement in all 3 dimensions

When the mouse pointer moves between the two white circles, a translucent, filled-in circle appears, Drag within this to initiate trackerball-style rotation.

Drag in this area for trackerball rotation
